

Project

Water Education for Teachers

Educator Workshop

Project WET teaches about water resources through hands-on, investigative, easy-to-use activities. In addition to educating students about water, Project WET activities also develop skills such as teamwork, decision making and problem solving. These skills and knowledge prepare learners for the water resource challenges of this century. The curriculum spans grades K-12 with something to offer for all students.

Saturday May 24, 2014 9 am-12 pm

Environmental Studies Center
6101 Girby Road
